#### **DETAILED ACTION**

## **Drawings**

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the embodiments of claims 26, 31 and 44 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

# Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 24-44 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which

applicant regards as the invention.

In claim 24, line 6, "a resilient means adapted to engage a locking pin" renders the claim incomplete for omitting essential elements, such omission amounting to a gap between the elements. See MPEP § 2172.01. The omitted elements are: a positive recitation of the locking pin, and structural relationship between the pin and the arm. Without a pin and it connection to the arm, the "means for releasably interengaging" would raises uncertainty of operability. Further, lines 7-8, it cannot be understood what "releasing the resilient means" is meant structurally. And it is unclear what exactly "the means for releasing the resilient means" is referred to. Note similar errors in claim 43.

In claims 27 and 30, "diameter" is indefinite without defining the geometry of the locking pin.

Claims 32-37 are confusing. From claim 32, it is understood that "a key" is not a positive limitation, as suggested by "using a key". However, claims 33-37, depending from claim 32, appear to claim the structure of "the key" in combination with its counter part. It is not clear whether applicant attempts to claim the key-restricting device

Application/Control Number: 10/523,202 Page 4

Art Unit: 3677

combination or just the restricting device. For examination purpose, any "key" structure is not considered a positive limitation.

In claim 35, it cannot be understood how the "key rotation stop means" is structurally and functionally related to the "restricting device".

In claim 36, it cannot be understood what "a specially shaped portion" and "specially shaped hole" are structurally embraced.

In claim 39, it is not clear how "a C-section track" is related to "a track" of claim 38. Note similar errors in "a track" of claim 42.

In claim 41, it is not clear how "a friction slider" is related to "a slider" of claim 40.

# Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- (e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical

Application/Control Number: 10/523,202 Page 5

Art Unit: 3677

Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

5. Claims 24, 25, 27-36 and 38-44 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Gledhill (6,442,899).

Gledhill has a vent arm (26), a plate (22), releasable means (28, 68), and a key stop means (65). Gledhill is "releasable using a key" ("simple tool", "screwdriver", see col. 8, lines 46-51) and is "mountable" on any "track".

6. Claims 24, 25, and 27-36, and 38-44 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by FR 2370845. FR '845 has an arm (1), a plate (7), releasable means (16, 2), and a key stop means (18). Again, "releasable using a key" and "mountable on a track" do not constitute a positive limitation but only require the ability to so perform. FR '085 meets the limitations as claimed.

### Claim Rejections - 35 USC § 103

- 7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 8. Claims 26 and 37 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gledhill '899 or FR '085.

Art Unit: 3677

'899 or '085 discloses the invention as claimed but for the reverse locations of the resilient means and the locking pin. It would have been obvious to one having ordinary skill in the art at the time the invention was made to reverse the locations of the resilient means and the locking pin in '899 or '085, since it has been held that a mere reversal of the essential working parts of a device involves only routine skill in the art. *In re Einstein, 8 USPQ 167.* 

As to claim 37, it would have been an obvious matter of design choice to make the different portions of the key hole of '899 or '085 with a V-shaped notch to receive a key of corresponding shape, or of whatever form or shape was desired or expedient. A change in form or shape is generally recognized as being within the level of ordinary skill in the art, absent any showing of unexpected results. *In re Dailey et al., 149 USPQ 47.* 

#### Conclusion

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Chuck Mah whose telephone number is (571)272-7059. The examiner can normally be reached on 5/4-9.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Judy Swann can be reached on (571)272-7075. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
